Impressive growth continues at Antwerp Airport

The airport of Antwerp has maintained its spectacular growth of the past few months. We have concluded the first month of 2020 with a growth of 28.8%. Nearly 20 000 passengers traveled through Antwerp, as opposed to 15 464 in January of 2019.

This rise in passenger numbers is a consequence of the successful business connection with London City. Another factor is the improved occupation on all aircraft of TUI Fly flights. We have, among others, observed a significant improvement from the last few years in our connection with Innsbruck. Many skiing enthusiasts have found their way to Austria via the Antwerp Airport. Our Innsbruck connection is available until the end of March!

Taking into account the lower demand of air travel this time of year, we can conclude that the airport has registered a fine result for the month of January.

With regard to our punctual departures (OTP or 'on time performance') we have achieved an excellent and largely stable result compared to last year: 98.6%
